

search engine optimization

on-page seo optimization

keyword research:

- ✓ Identify relevant key words and phrases related to your content.
- Use key word research tools like Google Keyword Planner, SEMrush, or Moz Keyword Explorer to find popular and low competition key words.

meta description:

- Write a concise and compelling meta description that includes the target keyword.
- Limit the meta description to around 150-160 characters.
- Make it enticing to improve click-through rates from search results.

heading tags:

- Use proper heading tags (H1,H2,H3,etc.) to structure your content.
- Include the target keyword in the main heading (H1) if possible.
- Use heading tags hierarchy logically to organize the content.

internal linking:

- Include relevant internal links to other pages on your website.
- Use descriptive anchor text that includes relevant keywords.
- Internal links help search engines understand the structure of your website and improve user navigation.

title tag:

- Include your target key word naturally in the title tag.
- Keep the title tag concise, typically between 50-60 characters.
- Make the title tag compelling and relevant to entice users to click.

url structure:

- Create clean and readable URLs that include the target key word.
- Use hyphens (-) to separate words in the URL structure.
- Avoid using dynamic parameters and unnecessary characters.

content optimization:

- Create clean and readable URLs that include the target key word.
- Include the target keyword naturally throughout the content.
- Write for your audience, providing informative and engaging content.
- Make sure the content is well-structured with paragraphs, bullet points, and subheadings.

off page seo

link building:

- Create high-quality back links from reputable and relevant websites.
- Focus on acquiring natural and organic links.
- Guest posting on authoritative blogs or websites within your industry.
- Participate in relevant forums and include links in your comments or forum signature (if allowed).
- Engage in influencer marketing and collaborate with industry influencers for link mentions or endorsements.

online directories and listings:

- Submit your website to reputable online directories and listings relevant to your industry.
- Make it enticing to improve click-through rates from search results.

online pr and brand mentions:

- Reach out to journalists or bloggers to get coverage or mentions of your brand in online publications.
- Issue press releases for newsworthy events or announcements related to your business.

social media engagement:

- Establish a strong presence on social media platforms relevant to your business.
- Share your content regularly and encourage engagement (likes, shares, comments).
- Build relationships with influencers and engage with their content.
- Include social sharing buttons on your website to make it easy for visitors to share your content.

influencer marketing:

- Collaborate with influencers in your industry to promote your content or products/ services.
- Seek opportunities to have influencers mention or link to your website in their content.

community engagement:

- Participate in online communities, such as forums or social media groups, related to your industry.
- Provide valuable insights, answer questions, and share your expertise.
- Avoid spammy self-promotion and focus on building relationships and providing value.

technical seo checklist

website speed and performance:

- Optimize your website's loading speed by compressing images, minifying CSS and JavaScript, and leveraging browser caching.
- Ensure your web hosting is reliable and provides fast server response times.
- Use a content delivery network (CDN) to deliver your website's content faster to users across different geographical locations.

website indexing:

- Make sure search engines can crawl and index your website by submitting a sitemap to major search engines like Google and Bing.
- Check for and fix any crawl errors using tools like Google Search Console.
- Use robots.txt file to control search engine access to specific pages or sections of your website.

structured data markup:

- Implement structured data markup (schema.org) to provide search engines with additional context and information about your website's content.
- Use structured data to enhance search results with rich snippets, such as reviews, ratings, and product information.

mobile-friendliness:

- Ensure your website is mobile-friendly and responsive, providing a seamless user experience on different devices.
- Use responsive design techniques to adapt your website's layout and content to fit various screen sizes.

xml sitemap:

- Create and submit an XML sitemap to search engines, providing an organized list of your website's pages for easier indexing.
- Regularly update and maintain the sitemap as you add or remove pages from your website.

ssl certificate and https:

- Secure your website with an SSL certificate to ensure all data transmitted between your website and users is encrypted.
- Enable HTTPS on your website to provide a secure browsing experience, which can also boost your search engine rankings.

image seo checklist

image filename:

- Use descriptive filenames that include relevant keywords.
- Separate words with hyphens (-) rather than underscores (_) for better readability.

image size and compression:

- Large image files can slow down your website's loading speed, so aim for optimized sizes.
- Image format - JPEG, SVG, PNG & webp

image xml sitemap:

- Include images in your XML sitemap to help search engines discover and index them.

image alt text:

- Describe the image content in a concise and meaningful way.

image social sharing:

- Optimize images for social media platforms by adding Open Graph and Twitter Card tags.
